

Region: Asia Pacific – Hong Kong SAR

Project: Kingston International Centre, Kowloon Bay (金豐利中心)

Product: MEADRAIN® Supreme AC3000 with TopSlot Grating

Client: Swire Properties

Consultant: Aedas Architects

Main Contractors: Hsin Chong Groups Holding Limited

MEADRAIN® Supreme AC Series polymer concrete channels with TopSlot gratings provide an ultimate solution to replace traditional in-situ casted method in the Luxury Development.

Project Descriptions:

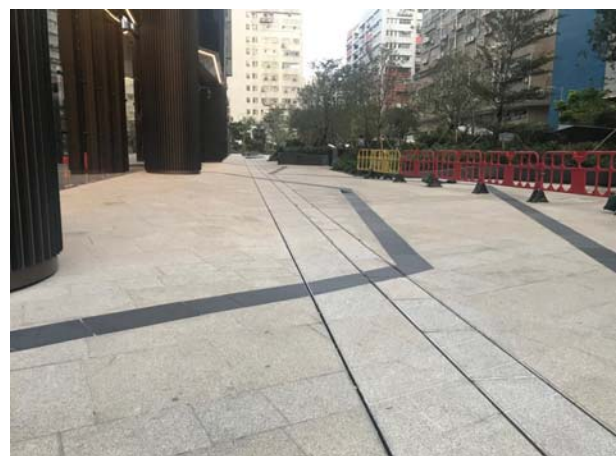

In 2011, the Hong Kong Government announced to transform Kowloon East into the second Central Business District (CBD²) beside our Central District in order to sustain the global development of Hong Kong. The traditional industrial areas such as Kowloon Bay and Kwun Tong become the origins to start a new engine of renovation where Kai Tak Cruise Terminal and luxury commercial developments have been locating in CBD².

Challenges:

Due to the massive traffic flow as well as the highly concerns from the public to have more pleasing and visible transformations in terms of greening, open spaces. However, the traditional gratings may not fulfill the new expectations in the modern society.

In addition, the channels should withstand the heavy traffic loads to provide an Emergency Vehicles Access.

Thanks for the wide variety of channel body and grating selections, an ultimate solution to the architect can be provided in order to tackle different challenges.
